# Warning: Myth Alert!

You've been really low for months; are you okay?

It's just the 'Baby Blues' – there's nothing I can do...

## Let's Bust 3 Baby Blues Myths

**Myth 1: Baby Blues can persist long after birth.**

**Fact:** Whilst unpleasant, the Baby Blues that accompany postpartum hormone changes are a normal part of life. In 80% of women they resolve within 14 days.

**Myth 2: The Baby Blues need to be treated.**

**Fact:** Whilst feeling awful at the time, Baby Blues don't need treatment unless your mood feels uncontrollable, or you're not sleeping – which for some women may be a sign of something worse.

**Myth 3: They always go away by themselves.**

**Fact:** In most cases Baby Blues resolve within 14 days with no need for treatment. If symptoms do persist beyond 14 days, call us for a chat; it could be something more serious and early intervention can help prevent escalation.

- Create efficient processes
- Implement IT systems to make your business more efficient
- Customer, competitor and data analysis

*Our experience was exceptional and consistently over-delivered. A lot of time was spent listening and understanding how our organisation works and together with senior management set a clear vision for growth. A practical plan was then drawn up with much attention to detail. The results were beyond our expectation!*
